

FREE 3-MINUTE CHECK

What's Your Family's Water Score?

Check one box per row — your honest answer. Then work the three gates below to find your level. In three minutes you'll know where you stand and the one step to take first.

YOUR WATER SETUP check one box per row	Not yet	Partway	Got it ✓
1. Know your number Your gallon target: people × gal/day × 14 days.	☐ Don't know it	☐ Roughly, never did math	☐ Worked it out
2. Store your water The water itself, on hand in your home now.	☐ Nothing set aside	☐ Some, not my whole number	☐ Full number stored
3. Stored the right way Cool, dark, full, food-grade, no fumes, freeze-safe.	☐ No water stored	☐ Stored, not ideal	☐ Cool, dark, freeze-safe
4. A scouted source Creek, river, lake, pond, roof rain, or neighbor's well w/ hand pump.	☐ No idea	☐ Pretty sure, must confirm	☐ Know exactly where
5. Purify without power A method that works grid-down (gravity filter is the workhorse).	☐ No way yet	☐ Needs power / untested	☐ Yes — no power needed
6. Grid-down water Spring, hand pump, OR backup power ready to run your pump.	☐ Pump's dead w/o grid	☐ Working on it	☐ Spring / pump / backup power
7. Redundancy Storage PLUS a source PLUS a way to purify.	☐ None in place	☐ One layer only	☐ Multiple layers

Now Find Your Level

Work down these three gates in order. The **FIRST** one you can't check 'yes' to is your level. Level 1 is the foundation — nail it before anything else.

EXPOSED ← Any 'Got it' box UNCHECKED in rows 1–3?

Your foundation isn't fully in place. That's your most urgent fix — and the cheapest. Get rows 1–3 to 'Got it' this weekend.

BUFFERED ← Rows 1–3 all checked, but row 4 OR 5 not?

Your stored-water foundation is solid — you can ride out the common emergencies. Now build your backup bridge: a source you can purify without power.

SECURED ← Rows 1–5 all checked 'Got it'?

You're ahead of nearly everyone. From here it's going from secure to truly independent — grid-down water (row 6) and redundancy (row 7) for your property.

STEP 1 Your One Next Step

Look back at your scorecard and find the FIRST row that isn't checked 'Got it' — starting from row 1 and working down. That's your next step, even if a later row looks worse. Level 1 (rows 1–3) comes before Level 2, and Level 2 before Level 3. Lock in each level before moving up.

My next step is row #: _____ I'll get it done by: _____

BONUS Scout Your Backup Source (Level 2)

Stored water buys you two weeks. A source you can purify buys you the long haul. This weekend, take a 10-minute walk — or pull up Google Maps (map AND satellite view) — and study the half-mile around your home. Jot down every possible source.

Look for: creek, river, lake, or pond · rain off your own roof · a neighbor's well that has a hand pump · snow in winter. Always filter surface water — never drink it raw.

Possible source	How far / how I'd reach it	Filter ready? (Y/N)

Three ways to make it safe: boil (1 min, 3 at altitude) · plain bleach (~8 drops/gal, 30 min) · a gravity filter.

The gravity filter is the workhorse — it needs no power. Which one fits YOUR source? That's a perfect first Academy question.

When you hit a decision you can't Google your way out of —

Which filter fits your water? Is your well too deep for a hand pump? What does an independent system look like for your property? That's what The Ready Life Academy is for — a clear plan for your situation, a weekly live Q&A with Nick & Lisa, and folks walking the same road. Inside, the Your Next Step assessment looks at your whole situation — water, food, heat, power and more — and tells you which to tackle first.
